How to Have a Good Night's Sleep

DNN NEWS

1. Go to bed and get up at the same time every day.
2. Sleep in a dark, quiet, and comfortable room.
3. Don't use your cellphone before bed.
4. A warm bath or reading before bed might help.
5. Do exercise every day, but not right before bedtime.
6. Don't have a heavy meal before bed.

Studies show that sleeping helps strengthen memories. When you learn something new, the best way to remember it is to sleep on it. When you fall asleep, your brain goes back through memories and decides what to keep and what not to keep. During a night of sleep, you go through light sleep, deep sleep, and Rapid Eye Movement (REM). These stages happen about every ninety minutes. Memories become stable during the deep stages of sleep. After that, REM plays a role in saving and putting together all the memories. That is why you might come up with a plan to fix a problem after a full night of sleep. Next time when you don't know how to work out a problem, just sleep on it.

brain 大腦, REM 快速動眼期, stable 穩定, problem 問題

12. What does “strengthen” mean?

- (A) to make something strong
- (B) to make something strange
- (C) to make something popular
- (D) to make something comfortable
